## METREX METRIZYME® DUAL ENZYMATIC DETERGENT

A neutral pH, non-corrosive 12% dual enzymatic detergent designed to lift proteinaceous matter and bodily fluids from the surfaces of instruments, particularly lenses, lock boxes and channels. Assists in the process of disinfection/sterilization by enabling them to work on “clean” instruments. The protein-dissolving enzymes allows a fast, simple removal of body fluids that often cannot be accomplished manually with soaps or detergents. Non-corrosive and safe for use on medical and surgical equipment and has a pleasant mint fragrance.

### MILTEX STERILIZATION CONTAINER SYSTEM

Container lid and bottom are both of a one-piece construction and have a uniform, anodized aluminum alloy finish. Lightweight yet durable to accommodate weight loads of surgical instrumentation. Handles stop at 90 degrees to aid lifting; low profile latch allows simple and secure lid closing. Retention plate employs an easy "click and lock" closure over disposable, quick-to-change filter. Dual silicone gaskets within retention plate and around perimeter ensure complete container and filter seal. Baskets are constructed with solid wire mesh to allow for maximum ultrasonic cleaning. Handles can be positioned to assist with secure and comfortable grasp for removal under sterile conditions.

**L&R 2014 ULTRASONIC CLEANING SYSTEM**

Remains one of the most popular professional cleaning systems in use today. Its size and capacity allow the operator the advantage of volume cleaning with minimal space requirements and low noise. This system features a cooling fan, stainless steel tank and cover, automatic tuning, multi-position drain, pilot light and timer as standard. Extremely popular for specialized applications because of its size and 80KHz frequency. It is routinely used for cleaning procedures where laboratory specifications are critical.

**L&R PC3 ULTRASONIC CLEANING SYSTEM**

The perfect compact ultrasonic cleaning machine. Its size makes it extremely versatile for use directly in the operator, sterilization area or laboratory. The quiet operation and aggressive cleaning strength make it ideal for cleaning burs, prophyl angles, partials, temporaries, splints, crowns, and other small objects. The stainless steel tank, cover and automatic tuning are standard features.

**L&R QUANTREX® ULTRASONIC CLEANING SYSTEMS**

Standard features include a stainless steel cover, automatic tuning and a pilot light. The Quantrex 140 and larger machines are equipped with a stainless steel, multi-position drain for convenient, easy solution disposal. A 30-minute/hold timer allows you to preset the cleaning cycle duration, or select continuous cleaning. All machines have earned worldwide approvals - CSA, LA, TUV, FTZ, GS Mark and meet FCC requirements. Each system is backed by L&R's exclusive Double Warranty. The entire unit is covered for defects in materials and workmanship for a period of 2 1/2 years. The housing is warranted for five years and the tank-to-transducer bonding is covered for 10 years.

## L&R E-VAC EVACUATION SYSTEM CLEANER CONCENTRATE

Easy to use non-foaming formula eliminates bacterial breeding debris. Now, cleaning evacuation systems is easy. First, use the E-Vac pump to dispense one ounce of cleaner concentrate into the E-Vac Pak. Add water to make one quart of solution, perfect for a single cleaning. Next, simply place the evacuation line into the E-Vac Pak and aspirate the solution through the system, including the high speed line, saliva ejector and cuspidor. Specially formulated to help dissolve organic debris, rope saliva and blood. In addition, the powerful non-foaming solution cleans away calcium build-up in the lines. Traps, pumps, drains and lines are left minty fresh without manual cleaning. Available in gallons. One gallon contains 128 cleanings.

## MIDMARK SONICLEAN™ ULTRASONIC CLEANER

No one will argue that ultrasonic cleaning is the fastest, most consistent and safest method of cleaning instruments and components. But because ultrasonic cleaners emit a high pitched sound, no one ever accused them of being quiet until now. Other ultrasonic cleaners use a standard slim wafer transducer that limits the maximum sound pressure that can be generated 2-3 watt/sq in. An industrial type ultrasonic stack transducer that results in a cleaner capable of reaching 12-15 watts/sq in. This superior acoustic pressure generated by the stack transducer, coupled with Soniclean's Overlapping Wave Frequency (OWF) technology, produces powerful cavitation. More power in the tank translates to cleaning your instruments quicker and more efficiently, Internal safety baskets sold separately. CSA, TUV, FCC and CE; ISO 9001 registered.

### MEDICAL ACTION VIEW PACK HEAT-SEAL POUCHES

View pack consists of a transparent blue tinted front sealed to a paper backing. The sides are secured by three rail seals to enhance peeling characteristics and eliminate the possibility of blowouts during autoclaving. The chevron seal has rounded corners for ease of opening and to reduce fiber/laminate tear. The transparent front is comprised of tough multiple ply tinted laminated polyester to polypropylene films. Medical grade white sterilization paper as specified by the British Standards Institute. Dual colored arrows are printed above the chevron indicating direction for correct peel of both pouches and reels. The pink arrows change to brown during steam or vapor sterilization and the blue to yellow/green when E.O. sterilized.

## SPS MEDICAL DISPOSABLE CSR WRAPS

Disposable, blue, nonwoven CSR wrap for packaging instrument trays and materials for use with steam, EO gas, chemical vapor or radiation sterilization. Offers an excellent barrier to airborne bacteria, repellency to water, OR fluids and alcohol when compared to reusable muslin wraps. Made of natural fiber-based materials (i.e. wood pulp), each sheet is biodegradable and does not emit odors, toxic waste or other residues when incinerated. Excellent product for use with table-top sterilizers which can have temperature spikes.

## SPS MEDICAL LOOPPLUS® SYSTEM

This banding machine is designed to secure packs before, during and after sterilization. Using a patented design, this machine automatically tensions, seals and cuts a LoopStrap around a pack in seconds, thus eliminating the need for autoclave tape. Increase worker productivity, save money and eliminate autoclave tape adhesive damage that can occur with reusable wrappers.

**SPS MEDICAL SPORVIEW® PLUS IMMEDIATE READ-OUT BI SYSTEM**

An in-office biological indicator (BI) monitoring system for use in steam sterilization processes. Each pack contains SporView self-contained BI spore tests and SteamPlus™ integrators that are certified to perform equal to a BI plus a safety factor. Reduce the risk and costs of surgical infections. Meet local and state guidelines for sterilizer testing. Make decisions and take immediate action in case of sterilizer failures. Eliminate recalls of improperly processed loads. Repair a malfunctioning sterilizer and get it back into service quickly.

- SCP-025 SporView® Plus
- SCP-050 SporView® Plus

**SPS MEDICAL SPORVIEW® SELF-CONTAINED BI**

An in-office BI system certified for use with saturated steam or EO gas sterilization processes. After processing in a normal load, the user activates the media vial then incubates at 56°C (steam) or 37°C (EO gas) for 48 hours. A color change in the media of a processed BI, indicates sterilizer failure.

## SPS MEDICAL STEAMPLUS TRAY RECORD CARD

Cards x 3" x 5" in size and comes with a SteamPlus Sterilization Integrator attached. Before processing, a Tray Record Card is filled out and placed into each instrument tray. After processing, the SteamPlus is observed and the tray released as sterile if the dark bar has entered the Safe area. Facilities can maintain this record as physical proof of sterilization. Certified equal in performance to a Biological Indicator plus a safety factor. Less expensive than a Biological Indicator and requires no incubation. For use with all Steam cycles. Provides immediate, physical proof of sterilization.

## RITTER M11 ULTRACLAVE™ AUTOMATIC STERILIZER AUTOCLAVE

Its unique 11" x 18" chamber gives it the distinction of the most sterilizing capacity of any standard countertop sterilizer on the market, making it perfect for larger packs and instruments. Easily accessible, front fill and drain tube features so you never have to move it to maintain or drain the water. Pre-programmed sterilization cycle controls: unwrapped (132°C or 270°F for 3 minutes), pouched (132°C or 270°F for 5 minutes), and packs (121°C or 250°F for 30 minutes). Programmable cycle features allow custom creation of different cycle parameters for special sterilization needs, such as the following: time (3 to 90 minutes), temperature (230 to 275°F), dry time (0 to 60 minutes), vent (slow or fast) and two program buttons allow you to store the custom cycles. 115VAC, UL61010A-1, UL61010-2-041, CAN/CSA C22.2

### ITTER M9 ULTRACLAVE™ AUTOMATIC STERILIZER AUTOCLAVE

Today, more than ever, you need products that are reliable and simple to use. This couldn't be easier and is time tested for reliability. You load it... set it... and forget it. Select your cycle and the time is set for you. Once the sterilization process is complete, the door opens automatically and quietly to dissipate the steam to give you fast drying time for your instruments. Easy front access for filling and draining and controls that are easy to understand. The chamber size if 9" diameter by 15" deep. Pre-programmed sterilization cycle controls: unwrapped (132°C or 270°F for 3 minutes), pouched (132°C or 270°F for 5 minutes), and packs (121°C or 250°F for 30 minutes). Programmable cycle features allow custom creation of different cycle parameters for special sterilization needs, such as the following; time (3 to 90 minutes), temperature (230 to 275°F), dry time (0 to 60 minutes), vent (slow or fast) and two program buttons allow you to store the custom cycles. 115VAC, UL61010A-1, UL61010-2-041, CAN/CSA C22.2
